

# SUCCESS STORY

## TEXTILE FACTORY

### ITALY

#### Efficiency is the red thread in Italian textile factory

**THE CITY PRATO IN TUSCANY** is located in one of the most important areas for the textile processing industry in Italy.

A Prato textile factory, which gets a considerable amount of textile off-cuts in their production, recently invested in an Orwak 3410 Sliding door. The textile factory was in possession of an old baler that had to be replaced by a new safer baler with modern features and functions.

Empress 2000, Orwak's distributor in Italy, presented the customer with this new solution and convinced him by running a successful test with the material.

The high capacity Orwak baler handles the large volumes of textile well and produces approximately two neat and firmly compacted bales per day. The full bales weigh 350-400 kg.

#### Bales sent to recycling

The textile off-cuts are sent for recycling and the most important advantage of the investment are the fewer pick up occasions and thereby the lower transportation costs.

**"The customer is very satisfied with his investment in the Orwak solution."**

#### Generous loading gate

The most significant product features in the choice of Orwak 3410 Sliding door were the generous loading gate, the bale size/weight and the comfort of the autostart and the automatic sliding door, which is always open after each completed cycle.

#### A good example

The compaction of fabric in the textile processing industry is a good example of yet another application area and yet another special niche of the market for Orwak balers to serve!
