WATER BOTTLING FACTORY

ITALY

Compacting bottles - a process that flows like water!

A WATER BOTTLING COMPANY IN ITALY

decided to replace an old unsafe baler with a modern bigger one with more capacity. They chose Orwak 3410!

Failed bottles from the production line need to be taken care of and disposed of in an efficient manner.

Orwak 3410 reduces the volume of the bottles significantly and the large chamber of the baler has the capacity to hold a considerable amount of material. Approximately 6-10 bales are produced per week.

"The customer is happy with the result as well as the features and advantages of the new baler."

The notable volume reduction of the bottles has diminished the external transportation costs and the dense bales of highly compacted material are firm and stable.

The four straps keep a firm grip on the PET-bale. The bales from the water bottling company weigh 250 kg on average.
